No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/09153927A

Sequence 2, Application US/09153927A

Patent No. 6297022

GENERAL INFORMATION:

APPLICANT: McDonnell, Peter C.

APPLICANT: Young, Peter R.

TITLE OF INVENTION: A Method of Identifying Agonists and

TITLE OF INVENTION: and TRS

CURRENT APPLICATION NUMBER: US/09/153,927A

CURRENT FILING DATE: 1998-09-16

EARLIER APPLICATION NUMBER: 60/061,334

EARLIER FILING DATE: 1997-10-08

NUMBER OF SEQ ID NOS: 11

SEQ ID NOS: 11

SEQ ID NOS: 11

SEQ ID NOS: 11

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

tumor necrosis factor receptor 1 precursor - rat

A;Cross-references: UNIPROT:P22934; GB:M63122; NID:g207361; PIDN:AAA42256.1; PID:g207362 C;Comment: This protein is one of two known receptors for both TNR-alpha (cachectin) and C. Superfamily: tumor necrosis factor receptor type 1 (TNRR1); NGF receptor repeat homolog C;Keywords: duplication; glycoprotein; receptor; transmembrane protein F:1-29/Domain: signal sequence #status predicted <SIG>

"An unappreciated role for RNA surveillance.";
Genome Biol. 5:RESEARCH008.1-RESEARCH008.16(2004).
-1-FUNCTION: Receptor for TNESF12/APO3L/TWEAK. Interacts directly with the adaptor TRADD. Mediates activation of NF-kappa-B and induces apoptosis. May play a role in regulating lymphocyte homeostasis.
                                                                                                                                                                                 "A new death receptor 3 isoform: expression in human lymphoid cell lines and non-Hodgkin's lymphomas."; Blochem. Note=May be produced at very low levels due to a premature stop note=May be produced at very low levels due to a premature stop—1: TISSUE SPECIFICITY: Abundantly expressed in thymocytes and lymphocytes. Detected in lymphocyte-rich tissues such as thymus, colon, intestine, and spleen. Also found in the prostate.
-!- SIMILARITY: Contains 1 death domain.
-!- SIMILARITY: Contains 4 TWFR-Cys repeats.
-!- CAUTION: Ref.5 reports for isoform 4 at position 208 a serine residue instead of arginine.
SUBUNIT: Homodimer. Interacts strongly via the death domains with TNFRSF1 and TRADD to activate at least two distinct signaling cascades, apoptosis and NF-Kappa-B signaling. Interacts with BAG4. SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1, 2, 9 and 11); Secreted (isoforms 3, 4, 5, 6, 7, 8, 10 and 12)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IsoId=Q93038-8; Sequence=VSP_006492;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EMBL; Y09392; CAA70561.1; -.

adjusting complex (DISC) performs caspase-8 protectly carrivation which initiates the subsequent cascade of caspases (asparente-specific cysteine proteases) mediating apoptosis (By similarity).

-!- SUBUNIT: Binding of TNF to the extracellular domain leads to homotrimerization. The aggregated death domains provide a novel molecular interface that interacts specifically with the death domain of TRADD. Various TRADD-interacting proteins such as TRAFS, RIP and possibly FADD, are recruited to the complex by their association with TRADD. This complex activates at least two distinct signaling cascades, apoptosis and NP-kappa-B signaling. Binds BAG4. Constitutively associated with TRPC4AP (By similarity).

-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- DOMAIN: Both the cytoplasmic membrane-proximal region and the C-terminal region containing the death domain are involved in the interaction with TRPC4AP (By similarity).
-!- SIMILARITY: Contains 4 TNFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. SIMILARITY: Contains 1 death domain.
SIMILARITY: Contains 4 TNFR-Cyg repeats.
                                                                                                                                                                                                                                                                                                                                                      16-OCT-2001 (Rel. 40, Created)

SUBCELLULAR LOCATION: Type I membrane protein and secreted.
DOMAIN: The domain that induces A-SMASE is probably identical to
the death domain. The N-SMASE activation domain (NSD) is both
necessary and sufficient for activation of N-SMASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ပ်

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

L. FUNCTION: Receptor for INFSE6/FASL. The adaptor molecule FADD

recruits caspase-8 to the activated receptor. The resulting death-
inducing signaling complex (DISC) performs caspase-8 proteolytic

activation Which initiates the subsequent cascade of caspases

(aspartate-specific cysteine proteases) mediating apoptosis. FAS-
mediated apoptosis may have a role in the induction of peripheral

colerance, in the antigen-stimulated suicide of mature T-cells, or
both (By similarity).

colerance, in the antigen-stimulated suicide of mature T-cells, or
both (By similarity).

colerance and maybe to other cytosolic adaptor proteins.

colerance and maybe to other cytosolic adaptor proteins.

colerance and maybe to other cytosolic adaptor proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.
